Orchids — Direct from Nature's Greenhouse Hawaii — Land of Flowers

Your patronage over the past two years has made possible the production of this, our first illustrated catalog. We are pleased to present this copy to you.

We have tried to make the listings both attractive and readily understandable. Plants have been grouped in a manner to help you understand some of their characteristics. This is particularly true in the sections devoted to Dendrobiums and Vandas.

Except where otherwise specified, the figures which precede price quotations are in terms of pot sizes. Where the term "log" is used, it means an established plant growing on a section of Hawaiian tree fern.

All plants are quoted F.O.B. Honolulu; no charge is made for packing. Plants are shipped out of pots, either by air parcel post special delivery or by air express as may be most economical depending on the size of the shipment. Transportation usually costs between ten and fifteen percent of the purchase price on orders of \$10.00 or more. We have no minimum for the size of an order, but suggest that you consider the increased ratio of transportation costs for orders under \$10.00. Do not remit cost of transportation at time of order. We will bill you for the exact cost after shipment. See page 47 of this catalog for discounts and other instructions for ordering.

All orders are serviced promptly. We try to ship within three days after receipt of an order. With modern air transportation, time in transit is not a matter of concern. We can deliver plants safely to any part of the world. We guarantee satisfaction.

Prices quoted are cash with order. We do not ship C.O.D.

WM. KIRCH-ORCHIDS, LTD.

HAWAII'S LARGEST SHIPPERS OF QUALITY ORCHID PLANTS

WM. KIRCH-ORCHIDS, LTD.

732 KAPAHULU AVENUE

HONOLULU 16, HAWAII

About Wm. Kirch-Orchids, Ltd.

People like to know a little bit about those from whom they buy. In local business you become well acquainted with the butcher, the baker and the candlestick maker. We are a long way removed from most of our customers so they can't easily drop in and get acquainted. If you do visit our lovely Islands, be sure to call us. We would like to show you our nurseries of which we are very proud.

WM. KIRCH—ORCHIDS, LTD. is a corporation owned and operated by seven Hawaiian orchid nurseries. Its function is to act as sales agent between the customer and the producer. We have found such cooperative operation to be most effective in giving our customers quick, efficient service and in freeing the grower from the multiple details of packing and shipping so that his full attention can be focused on growing better plants.

Our seven nurseries are located in various climatic regions on the Island of Oahu. We have a range in temperature, rainfall, and other climatic factors which allows us to grow a wide range of different orchid plants. No single nursery, regardless of its size, could possibly offer so wide a selection as that which you will find offered in this catalog.

Monthly meetings of the head growers of our nurseries give us the advantage not just of one grower's point of view, but the combined knowledge and years of experience of all seven. Active cooperation in the exchange of pollen, stud plants and ideas on breeding promote better plants than could be produced if we operated as individuals. The production of the seven nurseries is nearing one-half million orchid plants in various stages of growth. Therefore, we feel capable of handling any order regardless of how small or how large.

Our aim is to produce plants of the finest quality for the amateur. While many of our plants are suitable for the commercial production of cut flowers, this is not our primary goal. We feel that the amateur has the right to expect new, different, and better offerings each year. We feel further that plants for the amateur should be grown so that they will reach him in a condition which will make them easy to establish under his own conditions. Our hard grown plants, subjected to stimulating Hawaiian sunshine, are not to be confused with greenhouse grown subjects which must continue to have identical treatment or suffer a check.

We particularly want to help those who have problems about orchid growing. We do not expect to have all the answers; but if you desire advice, a letter to us will bring a prompt answer with the best knowledge on the subject we can offer.

We realize that many people hesitate to purchase plants sight unseen. All too often they have not received the quality and service they desire. To this end we reiterate that we guarantee satisfaction. A trial order will prove our point. We do make errors, we are human! If at any time a customer has a complaint of any nature, we want him to write us. We won't refer the complaint to the carrier. We take full responsibility and guarantee satisfaction to your door. To our knowledge, we have never had a claim which was not settled to the customer's satisfaction, and we don't ever intend to. We value your patronage and pledge ourselves to protect it. We have no quarrel with those who sell for less. They know the value of their stock.

BUY DIRECT — KNOW WHAT YOU GET!

LISTING OF STOCK

ACAMPE

Epiphytes similar in growth to Vandas. Do well in either intermediate or warm house. Flowers last well, but are primarily of botanical interest.

Longifolia (Burma)—Yellow, barred red. 7" \$ 7.50

ARANDA

Hybrids between Arachnis and Vanda. Growth much like a Renanthera. Large spikes of beautiful flowers of heavy texture and long-lasting quality. Do well in warm house.

Hilda Gallistan (A. Hookeriana x V. Suavis)—Cream to yellow, orange spots. Free flowering.

Punctata (A. Moschifera x V. Dearei)—Warm red-brown, barred tan. Very lovely. Flowering size 10.00

Queen of the Purples (A. Hookeriana x V. Coerulea)— Exceptional spikes of large blue flowers. Free flowering. Flowering size 12.50

AERIDES

A most handsome genus. Erect stems with thick, fleshy roots at intervals. Plants grow in pots or baskets half filled with crock or charcoal topped with rough osmunda or tree fern. Grow in Cattleya house.

Crassifolium (Burma)—May and June. One of the best.

Long, drooping spikes with fragrant amethyst-purple flowers.

6" 7.50-10.00

Falcatum (Burma)—Summer. 12 to 18" spikes. Creamy white, crimson tipped. 7-8" 7.50-10.00

Falcatum Var. Houlletianum — Very rare. Light buff, magenta tipped. 7" 25.00

Multiflorum (Burma)—Flowers deep rose, branching spikes. 7-8" 7.50-10.00

Lawrenciae (Mindanao)—Autumn. Large flowers. White to cream, with magenta. 7-8" 10.00-15.00

Aerides Lawrenciae

Odoratum (Cochin China)—Early summer. Many flowered racemes. Creamy white shaded pale magenta, fragrant. 7-8" 7.50-10.00

Quinquevulnerum (Philippines)—July and August. Exceptionally free flowering, white spotted, rosy purples

Virens (Java)—Spring. Long drooping racemes. Peach color, spotted purple. 6" 7.50

Lawrenciae x Fieldingii—A hybrid of great promise. We expect multiple flowering annually. Pink to lavender.

3" 4.00 4" 7.50 5" 10.00

AERIDOVANDA

Hybrids between Aerides and Vanda. Culture same as for Vandas or Aerides.

Mundayi (A. Vandarum x V. Teres)—Terete growth, pure white to flush pink. 12-18" stem cutting, ea. 2.50

Tsuruko Iwasaki (V. Sanderiana x A. Lawrencea)—One of the best, white pink spotting, spatulate growth.

1½" 1.50 2" 3.00

AV. Mundayi x V. Teres Andersoni—Should be large flower. Dark in color, Terete growth. 2" 2.00

3" 3.00 4" 4.50

5" 7.50 6" 10.00

R. Monachica x A. Crassifolium—A new generic combination. Should produce large sprays. Flowers orange-pink.

V. Tatzeri x A. Crassifolium—A fine new Aeridovanda. Flowers pink-rose. 1 1 / 2 " 1.50

V. Ellen Noa x A. Quinquevulnerum—A new cross that should be most interesting. Expect large flowers cream to white, lavender markings. Spatulate foliage.

2" 2.00 3" 4.00

A. Crassifolium x V. Cooperii—Terete foliage. Large flower, lavender color. Free flowering.

8-12" tall—ea. 5.00

ANGRAECUM

A beautiful Vandaceous genus from Africa. Flowers are curiously shaped, usually white, culture same as Aerides.

Distichum (West Coast Africa)—Summer. Produces many small stems with beautiful pure white flowers from the leaves.

3" 10.00

Sesquepedale (Madagascar)—Spring. Large 6" ivorywhite flowers with a spur on the lip. 8-12" long. The finest of all the species. 2" 2.50

ARACHNANTHE

A Vandaceous genus from India and Asia. Very curious flowers. Commonly called the Scorpion orchid. Grows best in warm house or in full sun in tropical regions. Flowers of heavy texture and long lasting.

Flos-Aeries—The brown scorpion. Large flowers, redbrown in color. 6-7" 10.00

Moschifera—Dark green with chocolate markings. A strong musk scent when in flower. Very bizzare.

6-7" 10.00

Arachnanthe (Cont'd)

- V. Herziana x A. Moschifera A bigeneric hybrid with Arachnanthe and Vanda. Should produce a blue. Scorpion shape.
 2" 2.50
 3" 5.00
- A. Moschifera x REN. Storiei—Named Aranthera Rainbow. Reds, purples, a rainbow of colors in the scorpion shape. 2" 2.50

3" 5.00 4" 8.50

8.50

4"

V. Mem. T. Iwasaki x A. Moschifera—Shades of green to yellow with darker spotting. Scorpion shape.

2" 2.50 3" 5.00 4" 8.50 5" 12.50

BIFRENARIA

Intermediate house orchids, allied to Lycaste and requiring similar culture.

Aurea (Brazil)—Small bright orange flowers.

Flowering size 5.00

Harrisonianα (Brazil)—Flowers 3", creamy-white to purple flush.

Flowering size 7.50

BRASSAVOLA

Epiphytes closely allied to Cattleyas and Laelia. Of easy culture. Grow as you would Cattleyas but give more light.

- Digbyana (Honduras)—April to May, Large solitary greenwhite flowers. Large fringed lip. The most outstanding species and of great value as the parent of modern Brasso hybrids. 6" 15.00
- Glauca (Mexico)—Spring. Flowers singly on short stems.

 Pure white with magenta eyes in lip. Heavy texture.

 Flowering size on logs 7.50
- Nodosa (Central America)—Autumn. Exceptionally free flowering. Terete foliage. White star-like flowers. Fragrant at night.

Flowering size on logs 2.50-3.50

HYBRID BRASSOS

Generic combinations containing Brassavola, Cattleya, and Laelia in various combinations. These constitute some of the most outstanding exhibition type orchids noted for their large size, particularly the labellum.

- BC. Sam Damon (C. Mrs. E. Roehers x B. Digbyano)— Lovely chartreuse and lemon yellow flowers. Exceedingly large lip. 5-6" 25.00
- BC. Montalvo (BC. British Queen x C. Santa Monica)— Large pastel lavenders of immense size, good shape and texture. 5-6" 17.50
- LC. Balkis var. Superbarx BLC. Nai Thong Leng—An exhibition type Brasso of great promise. Deep color, fine shape, lavender.

 2" 3.50
- LC. Tegucipalga x BLC. Nai Thong Leng—Similar to the above but lighter in color.
 2" 3.50
- LC. Melemele x BLC. Nanette—A Brasso of large size in either cream, light yellow or white. Good shape and texture.
 2" 3.00
- LC. Edward Matthews x BLC. Daffora—A combination of dark lavender and yellow parents to produce a deep lavender bronze. Shape and texture good.

 2" 3.50
- BLC. Eudora var. Summit x (C. Audrena x BC. Cliftonii)—
 A very large light pastel lavender. Should be most spectacular.

 2" 3.50
- (C. Hardyana x BC. Corrientes) x BC. Wake Island var.
 "The Queen"—Two very fine parents of the best exhibition quality. Dark lavender.

 1½" 3.00
 2" 4.50

- BLC. J. K. Lilly x LC. Sam Houston var. Brilliance—Excellent potential. Both parents of superb quality. Lavender. Fall and winter.

 2" 3.50
- BLC. J. K. Lilly x BC. Hartland var. Courageous—A very dark Brasso, superb round shape, flowering season winter.

 2" 2.50
 4.00
- C. Marguerite Coll x B. Digbyana—Pale pastel with very large frilled lip. Winter season. $1\frac{1}{2}$ " 1.50
- BC. Seafoam var. Snow Sheen x C. Concinnity—A speculative cross. Both parents white. Hope for a fine, white Brasso of fine shape and texture. $1\frac{1}{2}$ " 1.50
- BC. Daffodil x C. Gregorio Yellow var.—Deep butter-yellow and exceptional texture. Flowers 4-5" across.

 Winter. 11½" 2.00
 2" 3.00
- BLC. Meru x C. Concinnity—Both parents white. Expect pale pastel of good size and shape. 4" 7.50
- C. Furnace var. Majestic x BC. Diadem Lavender var.—
 A very dark lavender of brilliant color, good size and texture. 11/2''2.00
- BC. Diadem Alba (B. Digbyana x C. Eleanore)—A very large pure white with a beautifully fringed lip.

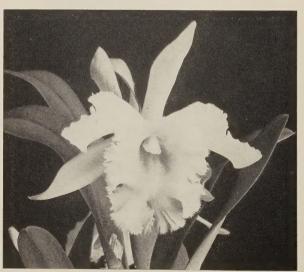

5" 15.00 6" 20.00

- BLC. Ben Kodama (LC. Canberra Stonehurst var. x B. Dibyana)—A highly variable hybrid. Colors range from green, yellow, orange, to red bronze. Flowers large. The best are hard to beat. 4" 10.00-15.00 5" 15.00-20.00
- BLC. Katherine Abe (Chief Joseph x Samoset)—Ivory to yellow with a red lip. Good shape and texture.

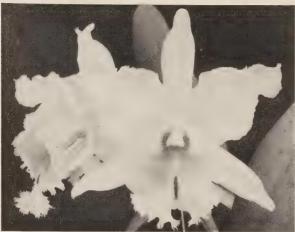

4" 12.50

- BLC. Kahawai (LC. Princess Margaret x B. Digbyana)—A primary Brasso. Deep rose-lavender. Large frilled lip. 4'' 5.00
- BLC. Kolohana (BC. Ilene x LC. Locarno) x B. Digbyana—
 An exceptionally large Brasso. Light lavender. Very large lip, deeply fringed.

4"

BC. Minerva (BC. Leemanae x C. Dowiana)—Very large straw yellow with red veining. Exceptionally large fringed lip. Summer and fall. 5" 30.00

BRASSIA

Closely allied to Oncidiums, often called the spider orchids. Grow in intermediate house. Give ample water when growing; drier when dormant, but not as dry as Oncidiums.

Longissima (Costa Rica)—Late spring. Orange-straw yellow. Exceptionally long sepals and petals.

Flowering size logs 7.50 Baskets 10.00-12.50

Verrucosa (Guatemala)—Spring. Long spikes, 1–2 feet. Flowers large. Greenish spotted deep purple.

4" 5.00

Flowering size logs 7.50

CATTLEYA—SPECIES

Cattleya species and hybrids are among the showiest of all orchids. They are the popular florist flower. They should be grown in intermediate to warm house. The species require ample water when in growth, but much less when dormant. They are among the easiest of all orchids to grow. Potting should usually be done just after the plant has flowered. Osmunda fiber is the preferred potting material although they do equally well in Hawaiian tree fern or on logs.

Aurantiaca (Guatemala)—Summer, Flowers 3". Clear orange, in heads of 6-10 flowers.

Flowering size logs 5.00

Chocoensis (Oaxaea)—Fall and winter. Flowers 4-6". Blush white to pale lavender.

Flowering size logs 3.5

Dolosa (Brazil)—Autumn. Dwarf habit. Flowers 4", rose magenta. Heavy texture and fine shape.

Flowering size logs 10.00

Gigas (Colombia) — Very large flowers. Rose-purple, crimson lip. Requires lot of sun, heat and water.

Flowering size logs 7.50

Gigas Alba var. Firmin Lambeau F.C.C.R.H.S.—A collector's item is this rare, beautiful, pure white species. Reported to have been sold once for \$10,000.00.

5-6" 100.00

Harrisoniana (Brazil)—Late spring. Lilac to deep rose, lip

with a touch of yellow. Flowers 4-5" heavy texture. Flowering size logs 7.50

Intermedia (Brazil)—April to May. Light lavender, flushed deeper rose. Flowers about 4".

Flowering size logs 5.00

Perciviliana (Venezuela)—Late fall to early winter. Rose to purple, with a darker lip and deep orange throat. Flowers 5-6". Flowering size logs 3.50

Superba (Essequibo) — One of the darkest of all the Cattleya species. Deep lustrous purple. Heavy texture. Flowering size logs 10.00

Trianae (Colombia)—Winter. One of the easiest of all orchids to grow. Flowers large. Lavender with darker lip. Flowering size logs 3.50

CATTLEYA—HYBRIDS

While most of the modern Cattleya hybrids contain either Laelia or Brassavola, a few containing the straight species are still made. These consist for the most part of the alba or pure white forms. They want more water than the species as they do not have such a prolonged rest period. The pure white forms also require a little less light.

Estelle Albα (Cowaniae x Edithiae)—A very fine and highly productive winter white. Good shape and texture.

5" 15.00
6" 20.00

Lyndell (Enid Alba McBeans x Urusla)—Quite variable.
White purple lip, lavender, white with deep splashed
petals have appeared. Spring flowering. 3" 6.00
4" 12.50

Rita Sladden x Angelina Alba—Should produce α very fine winter white of excellent texture and shape.

2" 2.50 3" 5.00

George Reynolds (Florence Dalton x Dinah, A.M.-R.H.S.)—
A proven exhibition Cattleya of quality. Lavender with dark purple lip.

3" 7.50
4" 15.00

Mossiae Reineckiana Young's var. x Princess Royal Alba
—A most satisfactory white with purple lip for spring.
Flowers large and well shaped.

4" 10.00

Granulosa x Forbesii—A green Cattleya of very heavy texture. Flowers 4-5". $1\frac{1}{2}$ " 1.00 2" 2.00

Mossiae Reineckiana x Dionysius Alba—Very similar to the above cross; later flowering and a slightly darker lip.

4" 10.00

Gigas var. Firmin Lambeau F.C.C.-R.H.S. * Mendelii var
Stuart Low—Speculative, but if Hurst is right on his
C & R inheritance factor for albanism, should produce
a fine summer white.
4" 7.50

Cattleya Gigas Alba var. Firmin Lambeau F.C.C.-R.H.S.

Cattleya Pavlova

Pavlova (Egret x Mossiae Wagneri)—Pure white, heavy-

textured, medium size flower. Bright yellow throat.

5" Pavlova x Edithiae var. White Empress—Heavy textured white. Fine shape and size. Heavy $11/2^{\prime\prime}$ 1.50 Bow Bells (Suzanne Hye x Edithiae)—A winter white of great reputation. High production and excellent car-11/2" 2" 21/2" 3" Pilgrim (Tityus W'birt var. x Prospector)—A winter lavender of good quality and very heavy production. Excellent as a cut flower. 10.00 Edithiae x Simplicity—A very clear white. texture and size. Winter flowering. Exceptional 11/2" 2" 21/2" Gladys Tsukamoto x Concinnity—Pure white, throat. Exceptional production. 1½" orange throat. Exceptional production. 2" 3" Kauluvela (Gaskelliana x Gregorio)—Rose lavender. 4-6 flowers on a spike. An exceptionally good grower 10.00 Hesperus (Enid x Hardyana)—Very heavy textured large flower of deep rose lavender with dark lip.

6" 30.00 Gladys Tsukamoto (Gaston Butel x Angelina)-One of the most prolific white Cattleyas we know. Sometimes 6"pots have twenty or more flowers. 5" 15.00

Javotte (Edithiae x Lady Veitch)—Large, white. Heavy 5" 20.00

Tityus (Enid x Octave Doin)-A very fine form of this famous hybrid. All divisions from one plant 25.00

CHYSIS

Best potted into pans or pots. Semi terestrial. They like a rich compost, old osmunda, oak mould, sand, and peat in equal proportions. Keep warm with lots of water when a growth. After growth, remove to cooler location and keep on the dry side.

Aurea (Venezuela)-Spring. 3-6 flowers. Brownish yellow, white with crimson lip. 4" Bractescens (Peru)-Spring, 5-8 Flowers. Wax-white, vellowish lip. Very fine. 5" 7.50-10.00

COELOGYNE

A most interesting genus from the amateur standpoint. Sometimes called the chain orchid. Pot in osmunda not too hard. They like plenty of water. Intermediate to warm house.

Asperata (Borneo)—Late spring. Long drooping racemes. Flowers 3". Cream-yellow, veined brown and orange.

Burfordense (Asperata x Pandurata)—A fine hybrid. Green to greenish yellow. Large flowers. Lip, black to brown.

Flaccida (North India)-7-12 cream colored flowers about $1\frac{1}{2}$ " across on short spikes. Very prolific. **6**"

Massangeana (Assam)—Not seasonal. Long pendulous spikes up to 2" in length with many buff-yellow flowers. 6" 7.50

Merrillii (Philippines)—A dwarf species. Translucent white flowers, 21/2". Short spikes. 4-5"

We do not grow the modern hybrids in Hawaii as our climate is too warm to insure good flowering. The species we list are all most interesting and proven to be free flowering. Best in warm to intermediate house. Should have lots of water at all times.

Aliofolium (Burma)—Spring. Pale green flowers of about 2". A beautiful pot plant. Considered a sacred plant by the Chinese.

Finlaysonianum (Malaya) — Pendulous racemes, many flowered. Brown-red. Very easy to grow. 6"

Giganteum (India)—Winter. Large flowers. Green-brown, striped red.

Grandiflorum (Sikkim)—Winter. Large flowers. Green. 6" 10.00 vellow lip spotted red.

Mastersii (India)—Α striking plant of unusual growth.
Resembles a dwarf palm. Large white flowers.

6' 10.00 yellow Pendulum (Asia)—A giant species. Large ocre flowers, red lip. Pendulous racemes. 6' 10.00

CYPRIPEDIUM

Lady slipper orchids. A very easy genus for the amateur to grow. Intermediate house, 50% shade, lots of water at all times. Pot soft in any rich compost, fertilize frequently.

Callosum (Siam)-A beautiful tessellated foliage type. Flowers deep purple and white, long stems. 7.50

Deep Concolor (Siam)—A charming miniature species. yellow, spotted brown. 2-3 flowers on a spike.

7.50 Fairrieanum (India)—Most distinct. Purple and white, with a curious oriental appearance. 4"

Godefroyae (Siam)—White, spotted purple; sometimes pure white. Excellent species. 3" 10.00

Haynaldianum (Philippines)-Large green foliage. Long spikes of up to 5 flowers. Green-brown, spotted pink. 5" 12.50

Cypripedium (Cont'd)

Insigne (India)—The easiest of all to grow. Can be handled as a house plant almost anywhere. Greenbrown.

4" 3.50
5" 5.00

Niveum (Siam)—Our favorite. Porcelain white, minute red brown spots like a bird's egg. Will charm everyone.

3" 12.50

Venustum (Asia)—A most unusual species. Green, purple, brown, prominent veining. Beautiful foliage.

4" 7.50

CYPRIPEDIUM HYBRIDS

We have many fine varieties to offer but not in sufficient numbers to catalogue. We shall be pleased to submit a special quotation on request.

CYRTOPODIUM

A genus from South America of great merit. Long spikes of beautiful flowers. Pot in large containers of $\frac{1}{2}$ soil, $\frac{1}{2}$ old osmunda. Fertilize and water heavily.

Andersonii—Clear green-yellow. 5" 7.50 6" 10.00

DENDROBIUM—SPECIES

A very large and polymorphic genus distributed over a wide range of the Pacific. All are easily grown. General requirements are decided periods of growth and rest. Plenty of heat, water, fertilizer when growing; keep dry and cool when dormant. Ample light at all times. Pot in osmunda or Hawaiian tree fern.

Dendrobium Chrysotoxum

Dendrobium Aggregatum var. Majus

Aggregatum var. Majus (India)—Spring. Dwarf habit, slender drooping spikes of beautiful orange flowers. Requires a long dry rest. 4" 5.00 5" 7.50

Flowering size logs 5.00 Baskets 10.00-15.00

Aggregatum Jenkensii (India)—Spring. A miniature form of the above. Flowering size logs 5.00

Moschatum Cupreum (India)—Large flowers. Apricot yellow, lip like a pouch. Spring. 4-5'' 7.50 6-7'' 10.00

Nobile (India and China)—We have a large stock of various types, lavender shades. Spring. Of easiest culture. Should be in every amateur collection.

Flowering size logs 3.50-5.00-7.50

Nobile var. Virginale—The pure white form.

Flowering size logs 10.00

Phalaenopsis (Australia)—Ours are all home grown stock from seed. Evergreen, A very fine species. Requires complete rest while dormant.

Rose-lavender 2-4" 1.00- 3.50
Deeper color 3-4" 5.00- 7.50
Pure white 4-5" 7.50-15.00
Var. compacta 3½" 7.50

Dendrobium Fimbriatum Occulatum

Dendrobium Lyonii

Pierardii (India)—Early spring. Pale pastel lavender, primrose yellow lip. Deciduous. Very easy culture. Pendulous. Flowering size logs 2.50–5.00

Primulinum (Burma) — Early spring. Pale rose-lilac.

Deciduous. Flowering size logs 5.00

Sanderae Major (Philippines)—Easily one of the finest of the genus and very rare. Large white flowers with lavender marked lip. Flowering size logs 25.00

Secundum (Malaya)—Autumn and winter. Most unusual. Flowers rose purple, lip orange yellow, small.

4-5" 7.50 Flowering size logs 5.00-7.50

Senile (Malaya)—A very curious little plant, has white hairs all over it, looks like a little old man. Beautiful green yellow flowers. Flowering size logs 7.50

Superbum (Philippines)—Spring. A large flowered species.

Very fragrant. Deciduous and pendulous. Lavender.

Flowering size logs 3.50-5.00

Superbum var. Dearei—Pure white form. 1½" 1.50

3" 5.00 4-5" 7.50-10.00 Large specimens 15.00-20.00

Toftii (Queensland)—A very rare evergreen species of great beauty, Slate blue-white. Very large lip. Good stud.

Thrysiflorum (Burma) — Spring. Spectacular species. Orange and white. Large pendulous trusses.

Flowering size logs 7.50

Tokai (Fiji) — Evergreen. Dark green flowers. Very charming. 4-5" 17.50

Undulatum (Queensland)—Variable. Evergreen. Brown and yellow shades. Long spikes, undulated flowers. Fine. 5" 12.50

Undulatum var. Bloomfieldii—The pure yellow form of the above. 6" 20.00-25.00

Dendrobium Lady Constance

Dendrobium Pauline

HAWAIIAN DENDROBIUM HYBRIDS

Dendrobiums of the hardwood evergreen type have come into their own new glory in Hawaii in the past ten years. Today, they constitute one of the finest groups of spray orchids for the amateur. Our new hybrids offer a range of types and colors that cannot be described in a few simple words. They are continually winning new praise and honors. We predict they will be grown in every collection in the next few years. Their flowers last for weeks in perfection.

Their culture is simple. They grow best in the Cattleya house. Give them as much light as

you can. In this respect they do well right along side your hybrid Vandas. When they are in active growth water copiously. They appreciate regular application of liquid fertilizer. After growth matures, reduce the water and fertilizer to harden the bulbs. Pot in osmunda as you would a Cattleya.

Dendrobiums are exceptionally fast growing plants. They frequently flower in 3" pots. Under good culture they often flower from community pots in two years.

GROUP I-Dendrobium Hybrids

These crosses have a strong influence of Dend. Phalaenopsis. The flowers are very large for the genus, the shape is good, and the spikes are long. They make very suitable subjects for cut flowers.

Paul (Taurus x Phalaenopsis)—Various shades of lavenderto rose, fine large spikes. $1\frac{1}{2}$ "1.502"2.503"5.005"7.50

Pauline (Undulatum x Phalaenopsis)—An old favorite.

DIACRIUM

A genus closely allied to Cattleya and Epidendrum, sometimes interbred. Culture as for Cattleyas but with more light and a pronounced resting period.

Bicornutum (West Indies)—The best of the genus. Lovely white flowers of perfect shape on long spikes. Summer.

Flowering size logs 10.00

Bilamellatum (Central America)—A much smaller edition of the above. Flowers often cleistogamous.

Flowering size logs 2.50 C. Gramulosa x D. Bicornutum—Speculative cross, fine

shape, heavy texture. Flowers green to yellow. $\begin{array}{ccc} 11/2'' & 1.50 \\ & 2'' & 2.50 \end{array}$

Epidiacrium Gattonense (D. Bicornutum x E. Radicans)— Reed stem type. Flowers larger than radicans. Orange in color with yellow and red spots.

Flowering size 3.50

3"

5.00

DORITIS

Closely allied to Phalaenopsis. Culture similar. However, they require more light and less water.

Pulcherrima (Chochin China)—Late summer. Lovely soft rose color flowers on long spikes.

6" 15.00

HAWAIIAN REED STEM HYBRIDS

Hawaii has bred a rainbow of colors in these lovely subjects. Will grow as pot plants to perfection. Lovely large heads of tiny flowers in wonderful pastel colors. Everyone should have some plants as they are constantly in flower.

Colors: Pink, Fuschia, orange, lavender, yellow, cream, red, rose, dusty rose, coral rose.

4-5"
2.00
White 4-5"

EPIDENDRUM

A most diverse genus of plants from the new world, of very easy culture. They require similar conditions to Cattleyas but more light. They are divided into two distinct groups. Reed stem types and those with psuedo bulbs.

Alatum (Guatemala) — Summer. Psuedobulbous type, stems terminal, long spikes of green-brown flowers.

Flowering size logs 5.00

Boothii (Mexico)—Psuedobulbous miniature. Straw yellow flowers. Flowering size logs 2.50

Ciliare (Tropical America)—Fall and winter. Psuedobulbous growth like Cattleya. Lovely green and white flowers. Flowering size logs 2.50-5.00

Falcatum (Mexico) — Very distinct, pendulous, flowers $3\frac{1}{2}-4$ " or more across. Greenish white.

Flowering size logs 2.50

Mariae (Mexico)—Beautiful little plant. Psuedobulbous.
Large sepals and petals olive green, large white lip.

5" 5.00

Nocturnum (West Indies)—Reed stem. Sepals and petals greenish white. Fragrant, particularly at night.

Radicans (Central America) — Reed stem. Bright orange flowers of very easy culture. Bright 4'' 2.50

Hawaiian Reed Stem Epidendrum Hybrids

Grammatophyllum Scriptum

Radicans var. Braceyei—A much improved type of the above. Flowers deep red orange. $4^{\prime\prime} \qquad 3.00$
Radicans var. Boyelei—A fuschia colored form.
4 0.00
Sacutum (Puerto Rico)—Reed stem. Lovely heads of tiny lavender flowers. $4''$ 2.50
Sacutum x Radicans var. Boyelei—A fine new hybrid. Good heads of coral rose, to tomato red. $5^{\prime\prime}$ 3.50
Schumanianum—The best of all the reed stem types. Blue, orange, brown flowers, large racemes. Baskets 4" 25.00
Stamfordianum (Honduras)—Distinct type with spikes from base of psuedobulbs. Straw yellow, marked red. Flowering size logs 5.00
Tampense (Tropical America)—Small psuedobulbs, many flowered spikes of yellowish brown flowers. Flowering size logs 2.50

with tremendous large heads of brilliant orange flowers.
4" 3.50
5" 5.00
EPI. Prismatocarpum x L. Flava—Deep yellow with purple

spots. Fine hybrid

EPI. CATTLEYA

Hybrids between Epidendrum and Cattleya.

Orpetii (C. Amethystoglossa x E. O'Brienianum)—Reed stem, lovely deep fuschia colored flowers. 3½" 3.50

GRAMMATOPHYLLUM

A large genus of orchids closely allied to Cymbidiums widely found over the Pacific region. Culture as for Cymbidiums except they should be potted in either osmunda or Hawaiian tree fern.

Scriptum (Philippines)—Long spikes of green and brown flowers closely set on the stem. A most striking specimen plant.

7.50-15.00

Baskets 25.00-35.00

Speciosum (Java)—The giant orchid. Bulbs up to eight feet, large flowers, chocolate brown and cream.

Divisions 25.00

ERIA

A genus that is very polymorphic. Principally from the Philippine Islands. Culture as for Oncidiums, except the one terrestrial species we offer which should be handled as for Sobralias.

Ornata—Round bulbs with several heavy green leaves.

Long spikes with brilliant orange bracts.

Species Unidentified—Upright stems with beautiful foliage.

Flowers closely set in the leaves, white with yellow.
Terrestrial.

4-5"
5.00

LAELIA

Closely allied to Cattleyas and truly one of the best genera. Culture same as for Cattleyas but more light.

 ${f Albida}$ (Mexico) — Winter. White flushed sepals and petals, lovely shaped little flowers.

Flowering size logs 3.50

Anceps (Mexico)—Winter. One orchid that should be in every amateur collection. Long spikes with 2-6 large layender flowers. Of the easiest possible culture.

Flowering size logs 2.50-5.00 Racks 5.00-7.50

Anceps Alba—The white form of the above.

Flowering size logs 7.50-10.00

Anceps var. Sanderiana—White with purple lip. A lovely type, exceptionally large flowers. $1\frac{1}{2}$ " 1.00

Anceps var. Veitchiana-White with blue lip.

Flowering size logs 10.00

Amoena (Anceps x Pumila Praestans)—A Laelia hybrid of exceptional shape and color. Dark lavender.

1½" 1.50 2" 2.50 3" 4.00

Autumnalis (Mexico)—Fall. Long spikes, 3-7 large rosecolored flowers. Flowering size logs 3.50

Autumnalis Alba—Pure white form of the above. Flowering size logs 5.00-7.50

Gouldiana (Mexico)—Similar to Autumnalis but much

darker in color. Winter flowering.

Flowering size logs 5.00

Lundii (Brazil)—A lovely miniature with soft pink-lavender flowers. Flowering size logs 3.50

Peduncularis (Mexico)—Dwarf. Long spikes. Rose-lavender flowers of exquisite shape.

6'. Flowers large, rose colored.

Flowering size logs 5.00

LAELIOCATTLEYAS

Hybrids between Cattleya and Laelia. Of a stronger constitution than Cattleyas and usually of more intense color. Culture as for Cattleyas.

- LC. Interbrosa x L. Xanthina—Deep orange to bronze. Heavy texture. Flowers small with many to a spray 2" 2.50
- LC. Cabazon x C. Amethystoglossa—A cluster type of great promise. Lavender with darker spotting. Good shape and texture.

On logs Ornithorynchum—Dwarf, lavender flowers on Faye (Lanceanum x Maureen)—Lanceanum color dwarf miniature plants. Most attractive. 3.50 Papilio x Kramerianum — Huge brown butterfly-like flowers. Most interesting. Flowers freely. Better than either of the species. Flexuosum—Many-flowered, branched spikes. Yellow. Flowering size 3.50-4.00 Lanceanum—Yellow, shaded green and spotted brown and purple. A fine species. 6" 7.50-10.00 On logs Lanceanum x Brassia Braciata—Most interesting generic hybrid of great pomise.

PHAIUS

Grandifolius—A beautiful terrestrial species. Compost same as for Cymbidiums. Plenty of heat and water and feed regularly. Large flowers, 4" across. Golden brown, purple lip and silver-white on back.

PERISTERIA

Elata—The dove orchid. Terrestrial. Treat as you would Phaius Grandifolius. Lovely white flowers.

PHALAENOPSIS

Among the most beautiful of all the spray orchids. They prefer about 50% shade, and should never be allowed to go completely dry. They grow well either in pots or baskets, potted soft with osmunda or Hawaiian tree fern. They are heavy feeders and should be fertilized regularly with nutrient solution. They seem to respond exceptionally well to the organic fish emulsion type of fertilizer. Temperatures should be even, not less than 60 degrees F. minimum, with 70% humidity. If the above conditions can be supplied, they are among the easiest of all orchids to grow. They reach maturity from seedlings very rapidly.

Jane L. Kingsbury x Monique—A very large, heavy textured white of beautiful round shape. 1.50 3.00 3" 5.00

Grandiflora x Nivea-Perfection of shape in this cross. 1.50 Pure white flowers, 3-4" across. 2" 3.00

Atala x Grandiflora—A large-flowered white of beautiful 2.50

Atala x Jane L. Kingsbury—Exceptional size, white, very 2.50 heavy texture.

Plenty of light, good drainage, lots of water when growing. Even when dormant, they should not be completely dry. Giganteum (Burma)—Large flat leaves, spikes of closely set pink and white flowers. 8" 12.56 SCHOMBURGKIA (West Indies) Allied to Laelias, culture the same. Give plenty of light. Do not disturb by potting more often that necessary. Luddemaniana—Deep bronze-brown, beautifully curled and waved. Long spikes with 12-15 flowers. Flowering size logs 7.56 Undulata—Long spikes, purple-brown flowers. Flowering size 7.56 L. Superbiens x S. Undulata—Chocolate-brown to law ender-bronze. 4" 7.56 C. R. Prowe x S. Luddemaniana—A pure white Cattleyy crossed with the lovely Luddemaniana. Probably yes

Spathoglottis Primrose

Very fine terrestrial orchids allied to Cattleyas which the flowers resemble. The flowers last one day but the plants flower over a long period of time. Pot in $\frac{1}{2}$ soil, $\frac{1}{2}$ old osmunda. Water and fertilize regularly. They should never get dry.

Leucoxantha (Panama)—Beautiful, large white flowers with a lemon-yellow throat. 8-9" 12.50

Panahii (Panama) Similar to the chara but of garding

Bouchii (Panama)—Similar to the above but of smaller habit. 6-7" 8.50

SPATHOGLOTTIS

Terrestrial orchids of great beauty. They make beautiful pot plants. Large plicated leaves with heads of flowers on long stems. Culture as for Sobralias but about 25% shade.

Elmeri x Plicata Alba—Lovely rose gold-bronze. Makes lovely little pot plants. 4" 2.50

Primrose (Aurea x Plicata)—Deep magenta-purple with cream-white tips to the sepals and petals. 4'' 5.00

STANHOPEA

The flowers of this remarkable genus are large and very showy, of waxlike substance. They are often very fragrant. The plants grow best on logs as the flower spikes grow down. Never plant in a pot. When in growth, they require abundant watering. Drier when dormant.

Grandiflora (Mexico) — Giant maroon-red and yellow flowers.

Logs 10.00

Bucephalis (Central America)—Tawny yellow to orange with crimson-purple spots. Logs 5.00-7.50

STAUROPSIS

Closely allied to Vandas, culture the same.

Fasciata (Burma)—Heavy-textured flowers on short spikes. Deep tan with lighter-colored bearing a curious cross shaped lip. 6'' 10.00

V. Dearei x S. Fasciata—A new generic combination that shows much promise. Large cream-yellow flowers.

4" 10.00 5" 12.50

6" 15.00 7" 17.50

Trichoglottis Philippinense var. Braciata

TRICOPELLIA

Very pretty plants. They like light and should be shaded only during summer. Pot in osmunda. When growing, give plenty of water; less when dormant.

Suavis—Large fragrant flowers. White, spotted pale rose. 5" 5.00

Unidentified Species—Green sepals and petals, white lip, orange and red in throat. 4'' 5.00

TRICHOGLOTTIS

A very striking genus from the Philippines allied to Vandas. Culture the same.

Philippinense—Tan yellow with a white lip.

Flowering size logs 5.

Philippinense var. Braciata—Black-purple. Very fine.
Flowering size logs 10.00

Stauropsis Fasciata

Trichovanda Ulaula

TRICHOVANDA

Hybrids between Vanda and Trichoglottis. The only one flowered to date is the one we offer. A very rare hybrid and most beautiful. A collector's item.

Ulaula (T. Braciata x V. Sanderiana)—Beautiful brick-red flowers of heavy texture. Price on application

TRIGONIDIUM

A curious genus that looks much like Masdevalia except that it will grow in warm conditions. Culture as for Oncidiums.

Semanii (Central America)—Single tan flowers on long stems with violet-blue lip. Many flowers per plant.

Flowering size logs 2.50

VANDA

A truly handsome genus distributed throughout the Facific and Asia. In habit they resemble the Aerides. Culture as for Aerides.

Dennisoniana (Burma & India)—Green-yellow flowers of heavy texture. Green-yellow flowers of 10.00

Merrillii (Philippines)—Deep Chinese-lacquer red flowers.

Very fragrant.

6" 10.00-15.00

Roeblingiana (Philippines)—Red-brown, stripped yellow.

Curious three-lobed, fimbriated lip.

6" 10.00

Suavis (Java)—Flowers white, spotted blue-purple, lip rose-purple. Flowering size 10.00-15.00

Tricolor (Java)—Similar to Suavis. Flowers yellow to cream, spotted red-brown, magenta-purple tip.

Flowering size 10.00-15.00

Dearei (Java)—Large cream-yellow flowers flushed tan, bright yellow. 6" 15.00

Luzonica (Luzon)—White, flushed magenta-purple, purple lip. Flowering size 10.00—15.00

Spatulata (Ceylon)—Bright canary-yellow flowers, small but round as a dollar. A beautiful subject.

" **7.50**

Teres—(India)—Terete growth. Spring flowering. Grow inside in pots during winter. After danger of frost is past, hang outside in full morning sun. Give lots of water at all times. Fertilize regularly.

12-18" stems, eα. 1.50

Teres var. Andersonii-Brilliant color-

12-18" stems, ea. 3.50

Teres var. Gigantea—Largest flower—

12-18" stems, ea. 3.50

Teres var. Grandiflora—Beautiful shape—

12-18" stems, eα. 3.50

Teres var. Candida—Pure white—

12-18" stems, ea. 10.00

ZYGOPETALUM

Mackayii (Brazil)—Autumn. Most unusual colors—white and purple, lined with violet purple. Very fragrant. Culture as for Cymbidiums.

Flowering size 5.00

Vanda Teres

Vanda Sanderiana

Vanda Tatzeri

Vanda Ohuohu

VANDA HYBRIDS

We are indeed proud to offer this very complete listing of these fine hybrids. They, along with our Dendrobium hybrids, make Hawaii famous. The response from the public to these magnificent orchids at shows all over the world, the blue ribbons they win, the acclaim from tourists who see them here in Hawaii, all prove our previous statements that Vandas are on the threshold of great acceptance. We know of no other group of orchids that has made such rapid strides of improvement as have Hawaiian Vandas and Dendrobiums in the last ten years.

Culture: Strap leaf Vandas are of easy culture in temperate greenhouses. Temperature requirements are the same as for Cattleyas; namely, 58 degrees F. to 80 degrees F. Higher day temperatures will not harm them. They require as much light as you can give them without foliage burn. Obviously, such light intensity will vary from region to region. They are heavy feeders and should be fertilized regularly. Any good complete nutrient solution

recommended for orchids will do. They like light buoyant air, but should have at least 60-70% humidity. Potting can be done either in pots or slatted baskets. Use osmunda of hard fiber type in pieces or Hawaiian tree fern. Do not pot hard. Be sure they drain quickly. They want to be watered frequently, but to dry quickly. Obviously, hard potting is not conducive to this.

In tropical regions where the temperature does not fall below 60 degrees, these plants can be grown outdoors. Give full morning sun, 50% shade after noon. Fertilize, water frequently. Pot as described for temperate regions.

All of our plants are grown hard. It is best to pot them on to the next size pot when you receive them. Vandas benefit by oversizing. They do not like to be underpotted.

For your convenience we are grouping the plants into categories that will help you to better understand their potential.

Vanda Honolulu

GROUP I-Vanda Hybrids

This consists of varieties that are of proven merit. They can be purchased with complete confidence of the result to be obtained. All of our strains are made with outstanding parent plants. For both the amateur and the commercial cut-flower grower, these plants offer the best buy for your money.

Fair Queen (Clara S. Fisher x Rothschildiana)—A new hybrid, quite variable as to color and shape. The best of them are tops. Pink, blue, and rose color, large flowers.

GROUP IV—Vanda Hybrids

A new group involving V. Prince Charles. This hybrid is described in the "Orchid Journal," Vol. I, No. 4, April, 1952. A hybrid that has exciting colors but lacks shape and size. Our crosses have all been made with large flowers to add size to these new color com-

ROUP VIII—Vanda Hybrids	50

These crosses contain what we in the Islands call V Batemanii. This is more correctly known botanically as Vandopsis lissochiloides. The hybrids are characterized by large plants with heavy foliage, very long flower spikes, exceptional texture of the flowers. These are among the most spectacular display plants known. The generic name for this group is Opsisanda.

If you have a special occasion and don't want to cut your own flowers, let us ship a corsage to you. We guarantee safe delivery. It is a thrill to say your flowers came direct from Hawaii, the land of flowers.

Hawaiian Ti Hybrid

HAWAIIAN TI PLANTS

Botanically known as Cordyline Terminalis and very closely allied to Dracena. The species are widely distributed over the Pacific. All plants offered here are new hybrids developed in Hawaii by cross pollination. They make beautiful pot plants for sun porch or greenhouse. They are vastly superior for this purpose to such plants as Palms or Crotons. Pot in any good soil, giving ample drainage.

Akaka Falls—Pointed leaf. Center purple green, margined red. New growth bright fuschia color.

Apple Juno—Dark green, round leaves. Edge, pale pink and green.

Cummings Red—Large leaves. Green, flushed purple bronze. New foliage, crimson-purple.

Dillingham Pink—Slender leaves. Deep metallic green; wide pink, purple edge.

Dillingham Red—Bright slender purple leaves. Brilliant

purple edge.

Giant Kalakaua—Very broad leaves. Purple, shaded

green. Bright purple edge.

Kalakaua—Round recurved leaves. Deep purple. Bright

purple edge.

Kamehameha—Broad leaf. Black-purple, fuschia edge.

Kalakaua's Sister—Broad leaf, heavy foliage. Marcongreen. New foliage purple, striped green.

Kauai Rust—Apple green, bright red margin.

Kauai Beauty—Short broad foliage. Deep green, veined red. Bright red edge.

Kona Beauty—Recurved foliage. Green, cream and purple, edged red.

Manoa Miss—Dark forest green, bright fuschia red edge. Foliage closely set.

Maunakea—Dark green, pale white. Green edge.

Pele Tongue—Small leaves, red green. Bright purple-red tip.

Pele Flame—Large pointed leaves, bronze-purple. Bright purple edge.

Pele Flow-Purple-bronze, bright red petioles.

Pele Smoke—Green, flushed deep rose.

Powder Puff-Semi-dwarf. Red-bronze and red.

Pink Crepe—Crinkled broad foliage. Deep green, margined white and pink.

Onomea Beauty—Copper-green, bright red edge.

Queen Ann—Bronze-green. Very large foliage, margined purple.

Queen Emma—Bright purple, flushed deep purple. New foliage brilliant.

Rainbow Juno—Large round leaves. Green, deep rose pink. Edge stripped green and pink.

Rooster Tail — Purple-bronze. Long pointed recurved leaves.

Sleeping Beauty—Recurved crinkle leaf. Bright purplegreen, margined fuschia. New growth, olive green.

We offer all varieties in two sizes: \$3.50 and \$7.50. The smaller size should go in 6'' pots, the larger 10-14'' pots. Plants shipped bare root, wrapped in moist spagnum moss.

Trailing Anthurium

HAWAIIAN ANTHURIUM HYBRIDS

Anthurium Andreanum Hybrid

ANTHURIUM ANDREANUM

These plants do well with orchids in the glass house. They require 50% shade, lots of water and fertilizer and the warmest part of the orchid house. They flower out of each leaf and the flowers last in perfection for weeks on the plant. They also make excellent cut flowers. Pot in old osmunda or Hawaiian tree fern. Wrap the stem with moss as it grows up in the air.

All plants offered are of flowering size. \$1.50 \$3.50 \$5.00 each

COLORS — Salmon, red, pink, blood red, orange, pale pink, and white.

TRAILING ANTHURIUM

A beautiful pot plant with pearly white seed pods of great charm. Will trail up a totem pole or make beautiful hanging basket.

INSTRUCTIONS FOR ORDERING

Terms are cash with order, no C.O.D. Remit only the amount of the purchase price of the plants. We will bill the transportation costs to you when they have been determined after shipment.

Discounts—We do not have any wholesale price list. Instead, we offer substantial quantity discounts in the belief that this policy is more equitable to all buyers. Orders totaling \$249.00 or less are sold at full retail list as quoted herein. Orders for larger amounts carry discounts as follows: \$250.00 to \$499.00, discount 10 per cent; \$500.00 to \$749.00, discount 20 per cent; \$750.00 to \$999.00, discount 25 per cent; \$1000.00 and over, discount 33 1/3 per cent. These discounts apply only to stock which we catalog.

Shipping—Plants are shipped out of pots.

Advise whether or not we may substitute size or variety in the event we are out of stock.

There is no packing charge.

Ordering—List the full name of the plants you want.

No import permits are required for entry into continental United States. Foreign countries, please check your requirements.

Remember, we guarantee satisfaction. If anything about your shipment is unsatisfactory, PLEASE write to us. We will cheerfully correct it.

All plants are offered subject to prior sale. Wm. Kirch—Orchids, Ltd. in no way guarantees the crop produced by these plants as such conditions are beyond our control. In the event of a claim, our liability is limited to the purchase price. This list cancels all previous quotations.
